Explanatory Notes

Introduction

Statistics of industrial accidents shown in this publication were derived from reports of compensative accidents made available to the ABS by the Workers' Compensation Board of Queensland and the Queensland Police Department, and are compiled on the basis of the financial year in which the accident occurred.

Scope of the Statistics

2. In Queensland, workers' compensation insurance is confined solely to the Workers' Compensation Board of Queensland which commenced operations on 1 July 1978. With policies issued under the 'Workers' Compensation Act 1916-1986', employers indemnify themselves against all sums for which, in respect of injuries to workers employed, they may become legally liable by way of compensation or damages in relation to that injury. Claims made on the Workers' Compensation Board of Queensland are the main source of information on compensative industrial accidents.

3. Self-employed persons are not obliged to insure, hence accidents of a number of workers in primary industry and in the professions etc. are not recorded. Also members of the Australian Government Service, including Australia Post and Telecom Australia, are excluded by the provisions of the Act, and coverage is thereby restricted in the administrative and communications industries. Accidents of members of the Police Force, although excluded under the Act, are collected separately and are included in the tables.

4. The scope of the collection is limited to include only those injured employees who lost at least a full shift from work as a result of an accident. Accidents occurring during recess periods or on journeys to or from work are not classified as industrial accidents, but some details of such accidents are presented in Table 17. In addition, details of persons who were compensated for a disease arising out of work or the working environment appear in Tables 15, 16, and 17. Cases of occupational disease precipitated or aggravated by some accidental event are classified to the antecedent work injury rather than to the disease.

Definitions

5. An industrial accident is defined as any compensated work injury or a compensated occupational disease causing death, permanent disability, or absence of the injured person from work during the entire interval corresponding to the hours of his or her regular shift on any one or more calendar days subsequent to the date of the injury.

6. Fatal injuries or diseases have been included in the tabulations on the condition that they were accepted by the Workers' Compensation Board of Queensland on or before 31 December 1986.

7. Permanent disability is an injury or disease which does not cause death but results in the complete loss or loss of use of any member or any part of a member of the body, or any permanent impairment of functions of the body or part thereof. All permanent disabilities have been tabulated unless rejected for workers' compensation.

Explanatory Notes (continued)Definitions (continued)

8. Temporary disability is an injury or disease which does not result in death or permanent impairment but renders the injured person unable to perform a regularly established job during the entire time interval corresponding to the hours of a full regular shift. Temporary disabilities are only included in the tabulations if compensation commences within 6 months of the accident.

9. Duration of temporary disability refers to the number of calendar days lost rather than to the actual number of working days lost.

10. Type of accident is the event which directly resulted in the injury, i.e. the manner in which contact was made between the injured person and the object or substance causing the injury.

11. Agency related to the accident is the agency, i.e. working environment, production equipment, animal, etc., which, because of its hazardous nature or condition, precipitated the event designated as the accident.

12. Industry classification is according to the Australian Standard Industrial Classification, 1983 Edition.

13. Occupation classification is according to the Classified List of Occupations, Revised November 1980.

14. Bodily location of injury refers to the part of the body injured. In cases where there is a major and minor injury resulting from the accident, only the major location is coded. Multiple locations are only coded when there is a major injury to more than one location.

15. Occupational diseases are classified to the three digit categories of the Ninth (1975) Revision of the World Health Organisation's International Classification of Diseases.

Unpublished Statistics

16. The ABS can also make available certain industrial accidents statistics which are not published. Where it is not practicable to provide the required statistics by telephone, they may be available in other forms, such as microfiche, photocopy, computer printout, or clerically extracted tabulation. A charge may be made for providing unpublished statistics in these forms.

17. For further information on these unpublished statistics, contact Keith Carter by telephoning Brisbane (07) 222 6054, or write to Information Services at the address above.

Symbols and Other Usages

n.e.c. Not elsewhere classified.

- Nil or less than half the final digit shown.

DEPUTY COMMONWEALTH STATISTICIAN

313 Adelaide Street,
BRISBANE 4000
12 June 1987

Summary of Findings

The number of work injuries resulting in an absence from work of one shift or more decreased from 51,333 in 1984-85 to 50,552 in 1985-86, a reduction of 1.5 per cent. Work Injuries for females, however, increased 4.8 per cent from 7,524 in 1984-85 to 7,882 in 1985-86. Accidents incurred away from the work area (i.e. accidents going to or from work and accidents during work breaks) fell 20.0 per cent from 3,125 in 1984-85 to 2,500 in 1985-86.

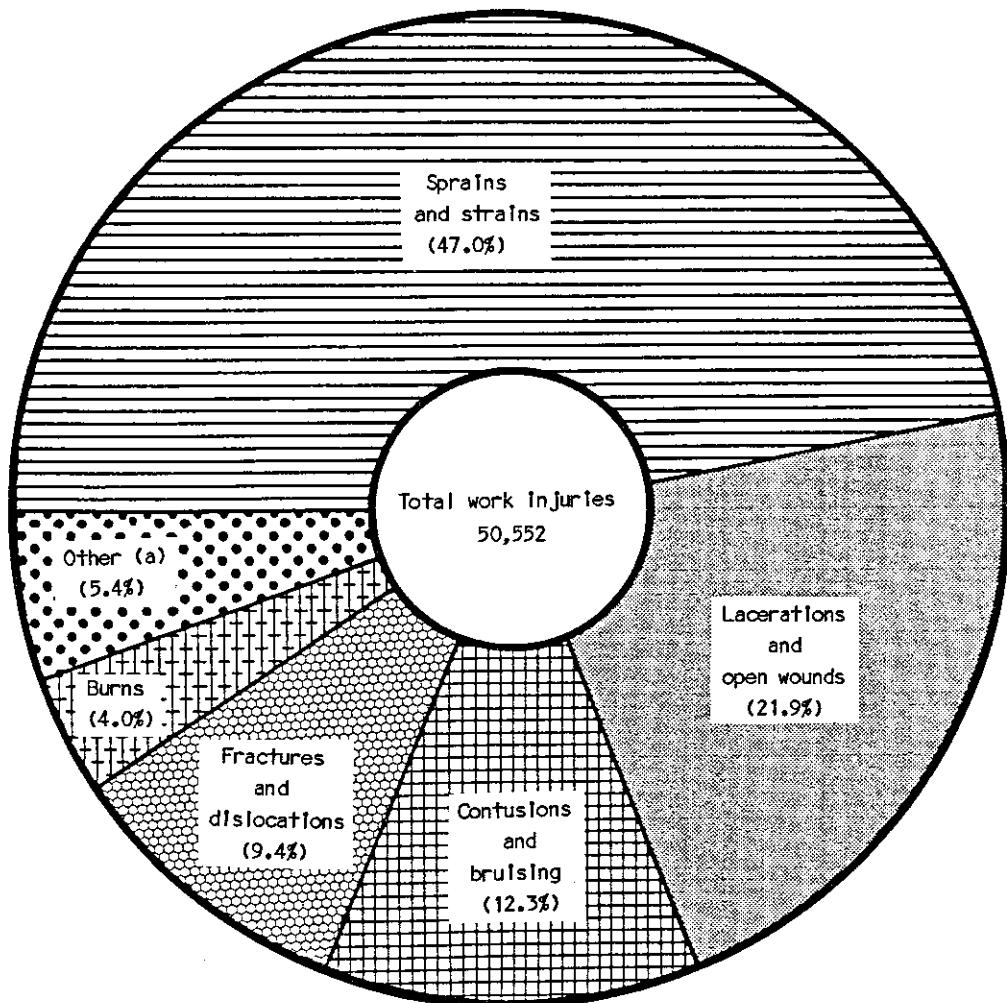

The percentage of work injuries by industry division changed little between 1984-85 and 1985-86. Manufacturing accounted for 32.4 per cent of work injuries in 1985-86 (32.7 per cent in 1984-85), wholesale and retail trade 13.1 per cent (13.1 per cent), construction 12.4 per cent (11.1 per cent), community services (including hospitals and nursing homes) 10.6 per cent (10.2 per cent), and transport and storage 9.6 per cent (9.7 per cent).

There were 56 work injuries resulting in fatalities in 1985-86. This compares with 55 fatal injuries in 1984-85. These fatal accidents occurred mainly in the road transport industry (12 in 1984-85 and 15 in 1985-86), construction industry (6 in 1984-85 and 8 in 1985-86), agriculture (5 in both years), and mining industry (nil in 1984-85 and 4 in 1985-86).

The number of work injuries resulting in permanent disability decreased by 27.5 per cent from 785 in 1984-85 to 569 in 1985-86. Of workers who were permanently disabled during 1985-86, 39.5 per cent worked in manufacturing compared with 43.1 per cent in 1984-85.

The average duration of temporary disability for work injuries in 1985-86 (24.7 days for males and 30.4 days for females) showed a decrease compared with the average duration in 1984-85 (25.7 days for males and 32.0 days for females).

Diagram 1 - Work Injuries by Nature of Injury, Queensland, 1985-86

(a) Including superficial injuries (3.3 per cent), internal injuries (1.4 per cent), and amputations (0.5 per cent).

Summary of Findings (continued)

Diagram 1 shows sprains and strains to be the most common injuries sustained. Sprains and strains were 44.6 per cent of all work injuries to males but 59.8 per cent of all work injuries to females. The statistics also show (see Table 10) that the parts of the body most often injured were the back (24.0 per cent of all injuries) and the fingers and hand (22.8 per cent).

Diagram 2 - Work Injuries by Type of Accident, Queensland, 1985-86

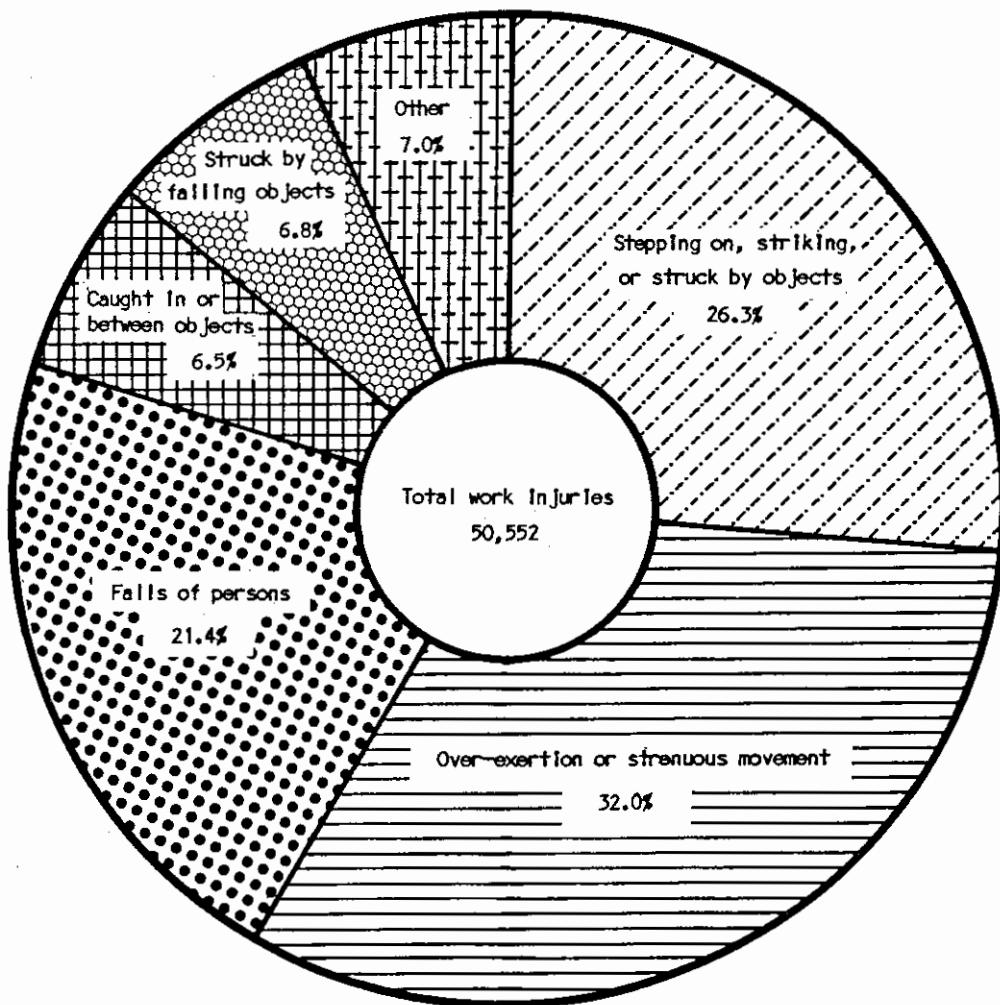

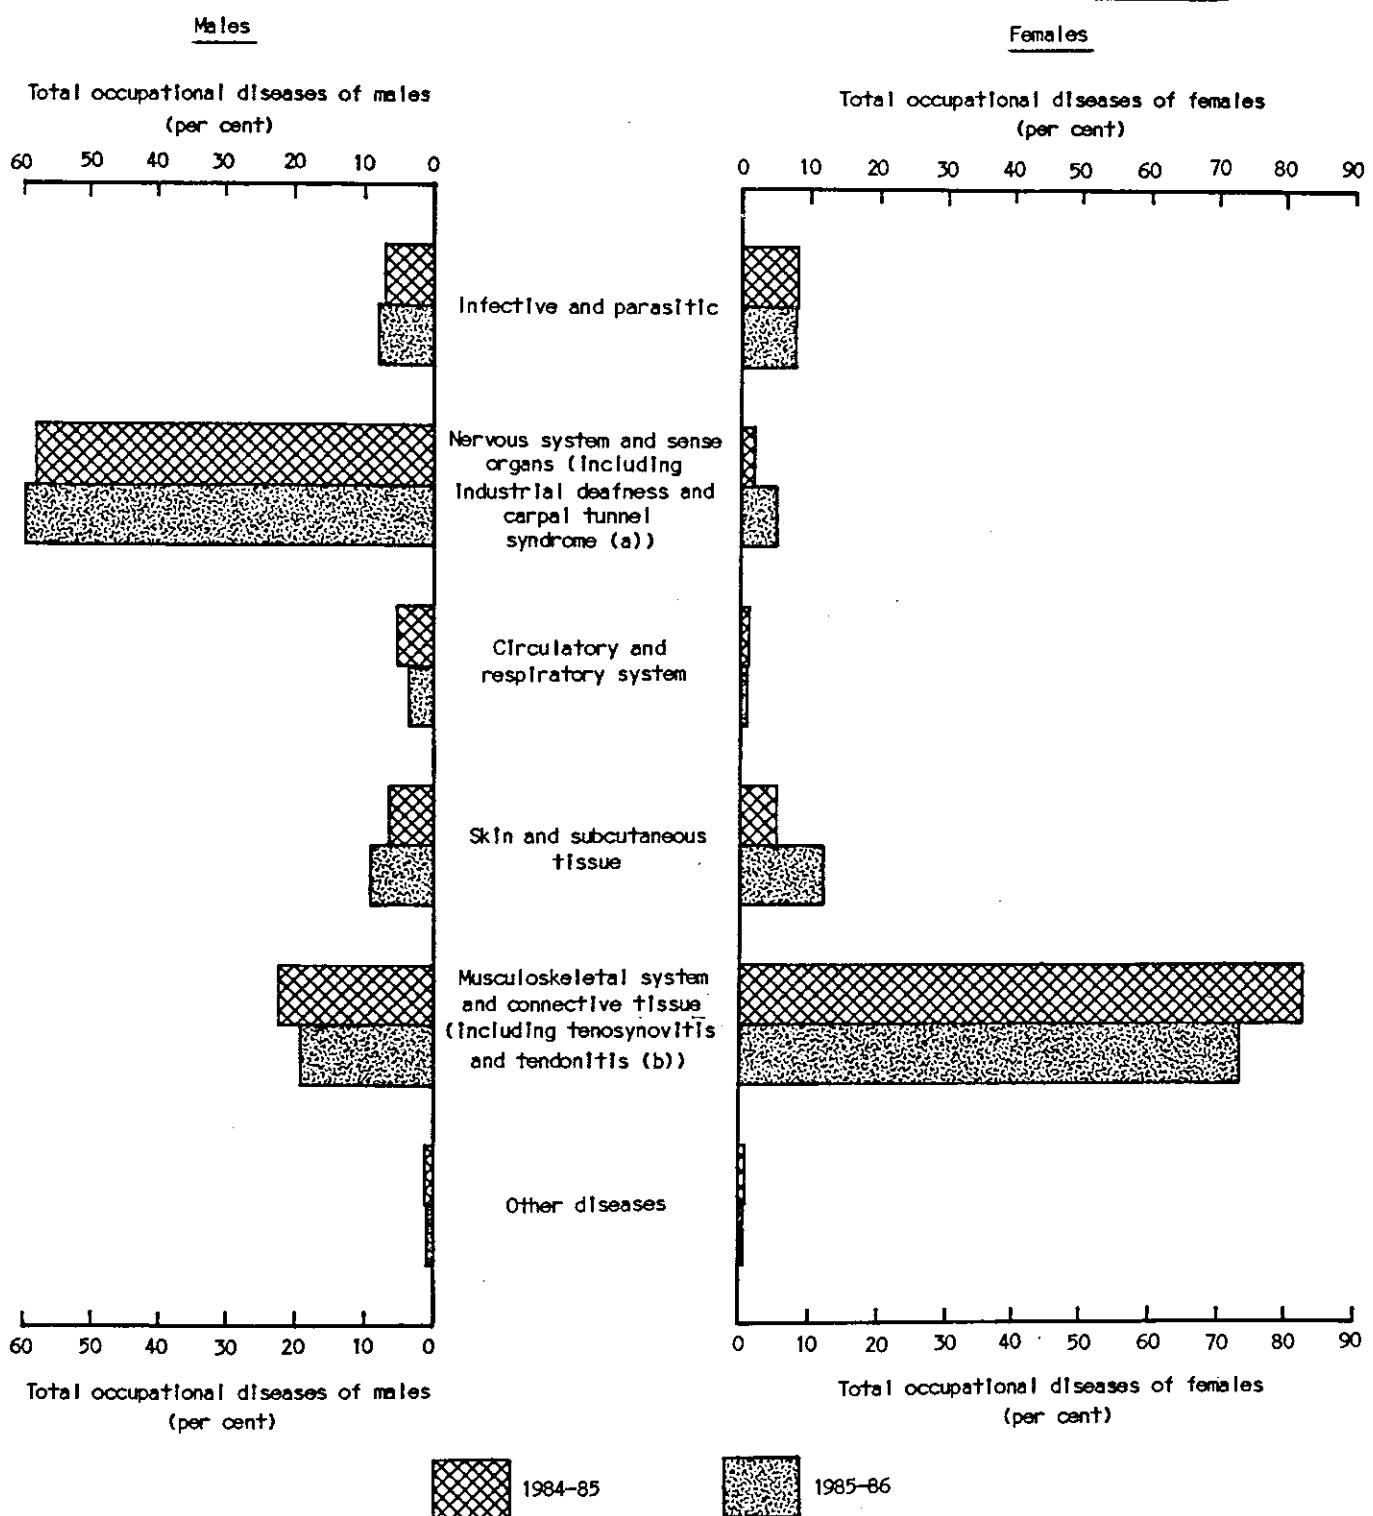

Diagram 2 shows the most important types of accidents for males and females combined. When the statistics for the sexes are examined separately, however, different emphases emerge. Over-exertion or strenuous movement accounted for 43.1 per cent of female injuries compared with 29.9 per cent of male injuries. Stepping on, striking, or struck by objects caused 27.7 per cent of male injuries but 18.4 per cent of female injuries.

Although there was an overall reduction in compensative work injuries during 1985-86, there was an increase in occupational diseases. These diseases increased by 11.8 per cent to 2,320. The largest group, deafness and other ear disorders, increased by 18.7 per cent to 973 and was responsible for most of the overall increase. In contrast, the next largest group, tenosynovitis and tendonitis (conditions commonly diagnosed in repetition strain injury cases) fell by 6.9 per cent to 788. The incidence of skin diseases (almost exclusively dermatitis) more than doubled, rising from 114 in 1984-85 to 233 in 1985-86. This higher level is consistent with the experience of recent years.

Summary of Findings (continued)

Diagram 3 - Occupational Diseases by Nature of Disease by Sex, Queensland, 1984-85 and 1985-86

(a) Compression of nerve in the wrist (sometimes diagnosed in repetition strain injury (RSI) cases).

(b) Inflammation of tendon and its sheath (often diagnosed in RSI cases).
